B + U: shared retrieval context and selected-set eligibility

S4–S5 shared Base / Base+U
19,963 query occurrences
14,869 database-distinct records

Within-source overlaps: 5,094
Cross-source duplicates: 5,282

Shared unique records: 9,587
Not a separate B+U denominator

Outside retained set: 5,977
Retained candidates: 3,610
2,932 clear; 327 unclear; 351 secondary

S4–S5 U-focused candidates: 392
3 prioritized for full-text appraisal
389 not thereby excluded

Other mechanism classifications
Possible cross-stage: 90
Not demonstrated: 299

Selected S1–S5 + U reports: 21
Full texts assessed: 20

Selected reports not retrieved: 1
Earlier S1–S3 + S4–S5 selection
Full search-to-selection join open

Selected-set included reports: 20
Not the total broad B+U yield

Selected full-text exclusions: 0
20 assessed = 20 included
Independent-study count not established

These are nested/selected audit routes, not a reconstructed exhaustive B+U flow. Shared retrieval cannot supply an independent B+U identification count. Selected eligibility is verified separately.
