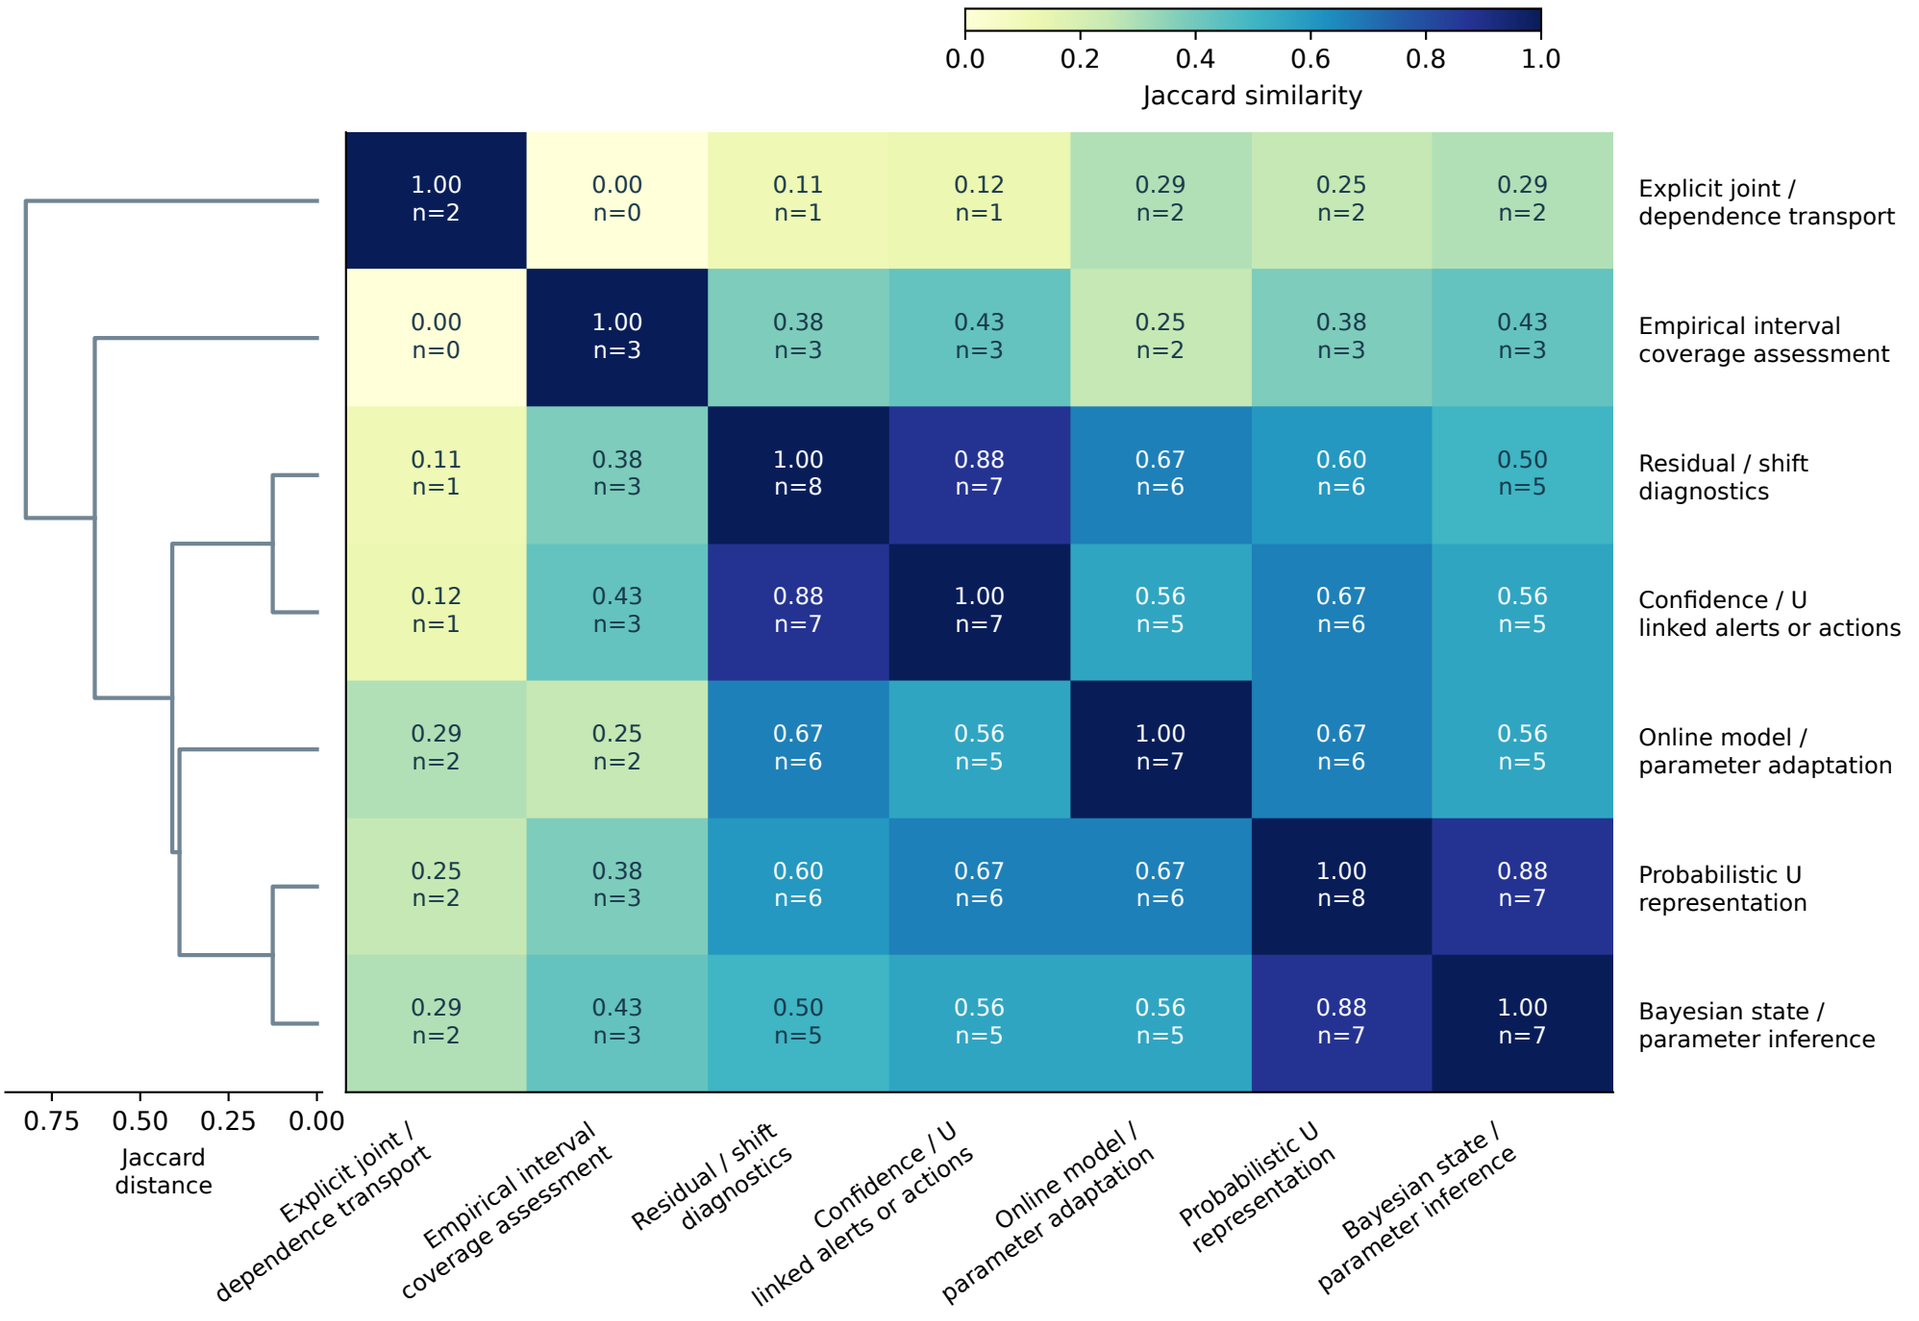
04 Which uncertainty mechanisms occur together?

Exploratory average-linkage clustering of ten method-level records. Reviews and conceptual-only tags are excluded.



Each cell shows similarity and the number of records reporting both methods. Clusters describe this selected working set.

Co-occurrence does not establish model coupling, causation or independent corroboration. Related author/study families remain a limitation.

Leave-one-record-out ranges are provided in the CSV. No significance test or stable architectural taxonomy is claimed.
