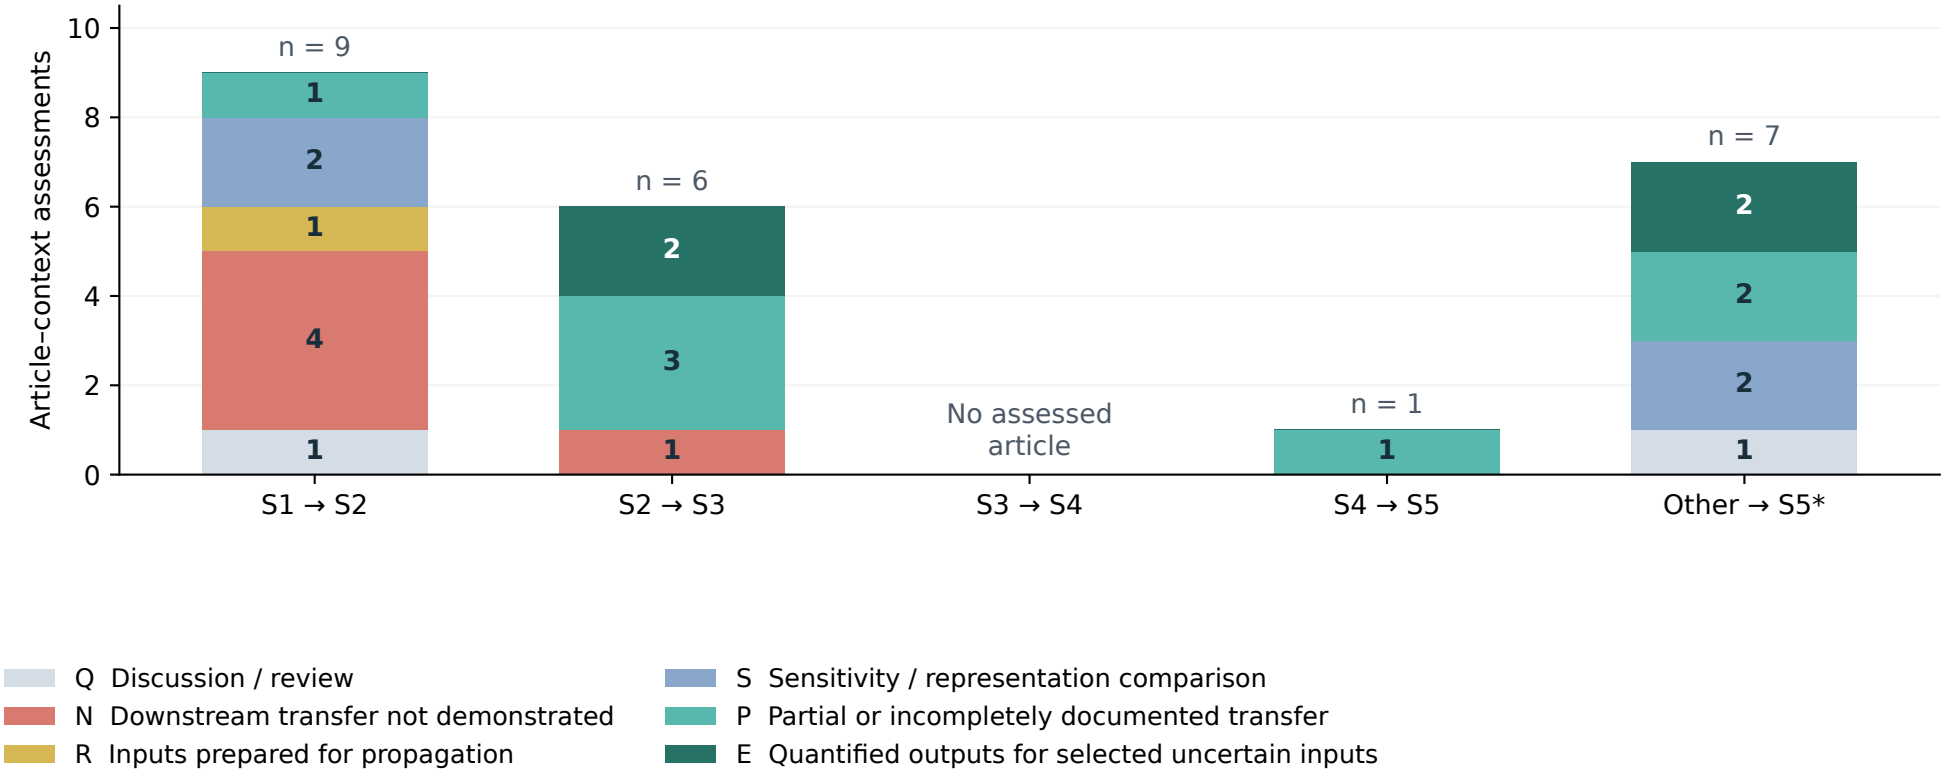
# Does local uncertainty analysis continue across the interface?

Separate from topic frequency: one assessed continuity category per article and context.



E confirms quantified outputs for selected inputs, not complete S1–S5 continuity. P retains documented limitations.

Other → S5 includes two complementary damage studies and a methodological review. S3 → S4 has no assessed article here.

20 papers generate 23 context assessments. U10 is abstract-only and excluded. No claim about the entire indexed literature.
